DATA ANALYST & BUSINESS IT SPECIALIST

PROFESSIONAL SUMMARY

Detail-oriented Data Analyst and Business Information Technology professional with strong proficiency in SQL, Python (Pandas, NumPy, Matplotlib), Power BI, Tableau, and Google Cloud Platform. Experienced in conducting Exploratory Data Analysis (EDA), building predictive models for risk profiling and delinquency prediction, creating interactive dashboards, and delivering actionable business insights that drive operational efficiency and revenue optimization. Proven ability to transform complex datasets into strategic recommendations, support enterprise ICT environments, and implement data-driven solutions for maintenance systems and SEO analytics. Passionate about leveraging data, AI, and cloud technologies to solve business problems and enhance decision-making.

KEY SKILLS

- Data Analytics & Visualization: SQL (advanced querying, joins, aggregations), Python (Pandas, NumPy, Matplotlib), Power BI, Tableau, Advanced Excel
- Exploratory Data Analysis (EDA), Data Cleaning & Quality Assurance
- Predictive Modeling & Risk Profiling: Machine Learning models for delinquency prediction
- Database Management: SQL, relational databases, backend data editing
- Cloud Computing: Google Cloud Platform (GCP)
- Enterprise ICT Support: Network management, hardware troubleshooting, ERP
- Other: System Simulation & Modeling, Technical Documentation, Agile methodologies, Django/FastAPI/Streamlit

PROFESSIONAL EXPERIENCE

Chief Data Officer (CDO)
Map Maven GMB Experts (Jan 2025-)

- Lead data strategy, governance, and analytics for Google Business Profile optimization and AI-powered local SEO systems.
- Design and govern data frameworks that power intelligent SEO, predictive analytics, and performance metrics.

- Collaborate with Chief AI Officer and CTO to integrate data-driven insights into automation and strategy.
- Own the analytics and metrics layer, turning raw data into actionable intelligence for business growth.

ICT Intern
Kenyatta National Hospital (KNH) — May 2025 – August 2025

- Provided technical user support and assisted in day-to-day ICT operations within a large-scale enterprise healthcare environment, contributing to improved system uptime.
- Hands-on experience in Workshop tasks: MS Word installation using Windows re-loader, setting up new computers, and changing UPS batteries.
- Networking: Performed cable management (trucking and drilling), RJ45 installation, network topology monitoring, and switch-to-server configuration.
- Business Center / HIS Support: Created test cases for Hospital Information System (HIS), interacted with file manager panels, and edited backend databases.
- Managed system documentation, troubleshooting, network management, ERP support, and data privacy protocols.

PROJECT EXPERIENCE Factory Facility Equipment Maintenance Management System (TINDI CMMS)
Academic Capstone Project — April 2026

- Designed and developed a full-stack, network-deployed Computerized Maintenance Management System (CMMS) for a Coca-Cola bottling facility using Django/FastAPI, SQL database, and Streamlit/Python.
- Implemented a smart technician assignment module and automated preventive maintenance (PM) engine.
- Targeted outcomes: Reduced Mean Time to Repair (MTTR) and improved Overall Equipment Effectiveness (OEE) through data-driven scheduling and monitoring.

AI-Driven Collections Strategy & Risk Profiling
Data Science Project — June 2025

- Performed comprehensive EDA on financial datasets using Python (Pandas, NumPy) and SQL.
- Built predictive delinquency models using classification algorithms (e.g., Logistic Regression, Random Forest).

- Developed strategic reporting dashboards (Power BI/Tableau) to optimize collection strategies and reduce financial losses.

Data Analytics & Visualization Job Simulation
Accenture (via Forage) — May 2025

- Conducted data cleaning, conceptual data modeling, and created visualization dashboards using Power BI and Excel.
- Transformed raw data into compelling data stories for simulated corporate consulting deliverables.

Business Performance Analysis
Awesome Chocolate (New Zealand Data Case Study) — May–June 2024

- Extracted, cleaned, and analyzed multi-channel sales and supply chain data using SQL, Python, and Advanced Excel.
- Developed dynamic Power BI dashboards to visualize regional performance, revenue structures, and key metrics.

EDUCATION

BSc in Business Information Technology
Multimedia University of Kenya – 2022-2026 (Expected Graduation: October 2026)
Relevant Coursework: Probability & Statistics, Data Structures & Algorithms, Database Management Systems (DBMS), Simulation & Modeling, Networks, Artificial Intelligence.
Professional Certificates

- Data Analytics Essentials, Cisco Networking Academy - May 2024 - June 2024 (Proficient in data analytics process, data transformation using analytics tools, statistical analysis, Excel, SQL, Tableau, and building project portfolios)
- Python Essentials 1, Cisco Networking Academy - 2024

ADDITIONAL INFORMATION

- Strong analytical, problem-solving, and communication skills with experience presenting technical insights to stakeholders.
- Proven ability to work in fast-paced enterprise IT and data environments.
- Solid understanding of relational databases, cloud pipelines, and data governance.
